Genetics & Development: First Assignment: Due Wednesdays, June 6. Please email this assignment to me at mossre@wofford.edu

1. Please tell me a little about yourself. Where do you come from? What else do you do or hope to do here at Wofford, other than study for biology?

2. What are your career goals?

3. What college level biology & chemistry courses have you had thus far?

4. Now here's the one that will take some thought, some research, and some work: IF you're enrolled at Wofford, come up with a detailed plan for the remainder of your science courses at Wofford. That includes chemistry, physics, and biology courses, and when you expect to take each. You're not committing to anything; just devise a revisable plan based upon your current hopes and goals and background. If you do not intend to major in biology, do this assignment relating to your expected major.

   If you wish to major in biology, you need 4 biology lab courses, and 2 biology non-lab courses beyond the “core” of bio 111, 113, 212, 214. You'll also need chemistry 123 and 124. If you plan on going to medical/dental/veterinary school, you'll also need chem 201 and 202, plus a year of physics with lab. We also strongly recommend physiology. All of these sciences must be completed before you take your MCAT/VCAT [physics can be AFTER the DAT]. Pick up the course catalog, and work out a coherent plan for your remaining time at Wofford. Actually list the numbers and titles of every science course you imagine taking, and when.
