FOR EACH SECTION: If yes, provide evidence. If no, suggest ways to improvement (you can suggest improvements if you answered yes too).

1. Is the project valid given the provided background information (i.e. supported)?

2. Is the hypothesis testable given the methodological description?

3. Is there an adequate number of subjects and/or data collection points to allow meaningful data analysis?

4. Are there appropriate controls to allow assessment of the independent variable?

5. What data analysis approach would you suggest?

6. What statistical analysis would be appropriate?

7. Use this space for any additional comments or suggestions:
