

Homework:

This assignment builds on what you have done in the last two assignments. Specifically, you will make changes to the pages [../CS115/index.html](#) and [survey.html](#). You should not use a web-authoring tool like Dreamweaver or FrontPage to do these assignments. If you have, you should go back and redo your work.

1. For each page, go back and reformat the source using “white space”, i.e., blank lines and indentation.
2. Make sure you have an appropriate title in the head section of each page.
3. In the body of each page, make sure you have an appropriate title formatted with `<h1>`. For each section in the survey page, use `<h2>` for the section header and `<p>` for the text under the header.
4. Create a new folder `../CS115/pictures`. Place a picture of yourself in that directory.
5. Put a link to the picture in the survey web page.
6. Use `` in the survey to set off course names and numbers.
7. Add a link at the bottom of the survey back to the home page in CS115.
8. Add a background color of your choosing and San Serif fonts on each page.
