

## CS350: Data Structures Class Notes

*Week 6, Class 18: Friday, October 10, 2008*

We spend much of the class going over the next big project—doubly linked lists and the MTA route project. We also talked about list traversal, list search, and implementing stacks and queues using arrays.

**Homework for Monday:** Extend Linked List with classes for Queues (required) and Deques (extra credit). Use inheritance.
