

CS350: Data Structures Class Notes

Week 7, Class 20: Wednesday, October 15, 2008

Today we,

- Talked briefly about the homework & profiling
- Finished talking about hashing including the problems with removing an item from a hash table
- We began talking about sorting. Key considerations are: best case complexity, average case complexity, worst case complexity, stability, in place, and recursive

Homework for Friday:

ADT for doubly linked lists as part of programming project
