

CS350: Data Structures Class Notes

Week 6, Class 16: Monday, October 6, 2008

Today we continued with linked list. We began by talking about box-pointer notation. We used this to sketch out operations on lists to visualize and check what we were doing. We looked at the node class and began describing the unordered list class.

Homework for Monday: Nothing to turn in. Pull the code from Chapter 7 into a single file that you can play with.
